

Tasks to solve in this exercise

1. Input the "Features data set.csv" and have a look at the dataset
2. Remove the columns "MarkDown1-5"
3. Use the Auto Field tool and then the Browse tool to find out which conversion has worked
4. Convert the date using the correct format
5. Convert the Temperature (in Fahrenheit) into Celcius using the formula
$$(\text{Temperature (in Fahrenheit)} - 32) * 5/9$$
6. Remove the original Date column and rename the new Date column and change the Type of the new Temperature column in Double.
7. Save your workflow as "Exercise_3"

Good luck and enjoy the assignment! 😊
